

Inventory Management System

Main Goal:

Develop an inventory tracking application to manage item information and availability.

Requirements and Objectives:

Inventory Tracking:

- The system must enable users to add, update, and remove items.
- Items must have name, price and quantity information.
- The system must be able to handle invalid or bad inputs.

Inventory Display:

- The system must enable users to view all items and their stock levels.
- The item information must be properly formatted and easy to read.
